1. Case Allocation

This module is used to facilitate the allocating judge to allocate the cases to courts. While allocating, the allocating judge need to know the pendency status of the particular court to which the case is being allocated. To do the proper case allocation various features are available in the software

1.1 Prepare Data

To fetch the above mentioned information is time consuming and resource hungry for the software. This option is used to prepare the counts of unallocated cases in temporary table. This option is to be run before allocation commences everyday.

1.2 Allocation of Case

This feature allows the user to select the case individually or List all the cases which are not allocated yet. When the case is selected, party names are displayed automatically. By default current date is displayed as date of allocation. If the first Stage and Next Date are entered at the time of registration then those details are displayed automatically. If not entered then the user may enter the next date and stage details at the time of allocation.

The list of courts, total number of cases and the number of cases on each case type is shown.

Court to which the case is to be allocated to be clicked. All the selected information is to be submitted.
